Recorded Demo - Sage PFW: FRx Add-On Module - Enhancing Your FRx System for Greater Efficiency
Do you have a lot of reports to produce and distribute across your organization? Would you like to organize all the reports and documents you pull together at month-end into one convenient package? Do you wish your reports could be automatically generated and distributed for you? Maybe you want to make it easy for users to get access to FRx reports at any time, and any place. If you answered 'yes' to any of these questions, this is the session for you!

We will look at how FRx Report Manager can assist you in creating Report Books that allow you to distribute a complete catalog of reports to your decision makers no matter what the file type. If you have ever wanted the report generation process to be automated so that you can schedule reports to run on a regular basis without hassle or worry, then FRx Report Server with Scheduler is the solution you will want to see. For those remote employees that need to analyze information via the web, FRx WebPort can be an excellent alternative. We will wrap up with a conversation regarding the different types of user licenses that are available with FRx, so your entire organization can be a part of an effective financial reporting process.

Audience:
Current Sage PFW Customers
